

# STATISTICS PRESS NOTICE – WEEKLY DEATH STATISTICS (Week ending 30<sup>th</sup> October 2020)

9:30am Friday 6<sup>th</sup> November 2020

## **Covid-19 related deaths: week ending 30<sup>th</sup> October**

Latest figures published today by NISRA show that sixty-six deaths involving Covid-19 occurred in the last week, from 24<sup>th</sup> to 30<sup>th</sup> October. The total Covid-19 related deaths figure has now surpassed 1,000, reaching 1,053. Of this total, 605 (57.5%) deaths took place in hospital, 375 (35.6%) in care homes, nine (0.9%) in hospices and 64 (6.1%) at residential addresses or other locations. The 384 deaths which occurred in care homes and hospices involved 90 separate establishments.

The week ending 30<sup>th</sup> October saw the largest weekly number of Covid-19 related, hospital deaths (53) since mid-April; while the ten Covid-19 related deaths occurring in a care home in the same week compares to totals last seen at the end of May.

The comparative number of deaths reported daily by the Department of Health to 30<sup>th</sup> October was 706. These figures are based on patients having previously tested positive for the virus, whereas the NISRA figures are based on the information entered on death certificates, completed by medical professionals. They may or may not have previously tested positive for the virus.

Further analysis, which includes deaths of care home residents in hospital, shows that of the 469 deaths of care home residents involving Covid-19 in the year to date to 30<sup>th</sup> October 2020, 80.0% (375) occurred in a care home, with the remaining 94 occurring in hospital. On this basis, deaths of care home residents account for 44.5% of all Covid-19 related deaths; however, no assumptions can be made in relation to where or when the deceased contracted the disease.

Separate analyses based on the date of death registration, shows that the provisional number of total deaths from all causes registered in Northern Ireland in the week ending 30<sup>th</sup> October 2020 (week 43) was 368, 23 less than in week 42 and 84 more than the 5-year average of 284. Over the last 31 weeks in total, 1,478 'excess deaths' (deaths above the average for the corresponding period in previous years) have been registered in Northern Ireland, with the number of 'excess deaths' in the year to date to 30<sup>th</sup> October totalling 1,219.

Covid-19 was mentioned on the death certificate of fifty-one (13.9%) of the 368 deaths registered in week 43. This is the fourth consecutive weekly increase in Covid-19 related deaths and is similar to numbers last reported in the second half of May 2020. The total number of Covid-19 related deaths registered in the calendar year up to 30<sup>th</sup> October has reached 1,023.

Persons aged 75 and over accounted for two-thirds (64.8%) of all deaths and 78.0% of Covid-19 related deaths registered this calendar year up to 30<sup>th</sup> October.

For Covid-19 related deaths, those with an address in Belfast Local Government District (LGD) accounted for 277 (27.1%) of the 1,023 deaths registered in the calendar year to 30<sup>th</sup> October.

## NISRA

### November 2020

## NOTES TO EDITORS

1. Statistics on weekly deaths registered in Northern Ireland can be found at: <https://www.nisra.gov.uk/publications/weekly-deaths>
2. All media queries to Department of Finance Press Office at [dof.pressoffice@finance-ni.gov.uk](mailto:dof.pressoffice@finance-ni.gov.uk) or on Tel: 028 90816724. Out of office hours please contact the Duty Press Officer on 028 9037 8110 and your call will be returned.
3. Differences between NISRA's death registration statistics and the daily totals reported via the Department of Health are as follows:
  - The **daily updates** provided by the Department of Health (DoH) count the number of deaths reported by Trusts, where the deceased had a positive test for Covid-19 and died within 28 days, whether or not Covid-19 was the cause of death. DoH figures will not capture all deaths that do not meet this definition. These data are important because they are available earlier, and therefore give a quicker indication of what is happening day by day and are broadly comparable with the figures released daily in other parts of the United Kingdom (UK). **The DoH reported 706 deaths associated with Covid-19 by 30<sup>th</sup> October 2020 (including revisions up to 4<sup>th</sup> November 2020).**
  - NISRA weekly, provisional death statistics, which are based on death registration information collected by the General Register Office, count all deaths where Covid-19 was mentioned on the death certificate by the doctor who certified the death, whether or not Covid-19 was the primary underlying cause of death. The figures include cases where the doctor noted that there was suspected or probable coronavirus infection involved in the death. As a result the weekly totals

will usually be higher than the relevant daily figures - because the DoH daily updates only include those who have tested positive for the virus.

4. Quoted figures based on occurrence take into account registrations up to 4<sup>th</sup> November 2020, to allow for delays in death registrations.
5. Analysis of care home residents refers to deaths where either (a) the death occurred in a care home, or (b) the death occurred elsewhere but the place of usual residence of the deceased was recorded as a care home. It should be noted that the statistics will not capture those cases where a care home resident died in hospital or another location and the usual address recorded on their death certificate is not a care home; however no assumptions can be made about where or when the deceased contracted Covid-19 (and all figures include probable or suspect cases).
