

STATISTICS PRESS NOTICE – WEEKLY DEATH STATISTICS (Week ending 11th September 2020)

9:30am Friday 18th September 2020

Covid-19 related deaths: week ending 11th September

Latest figures published today by NISRA show that eight deaths involving Covid-19 occurred in the last week, from 5th to 11th September. The total Covid-19 related deaths figure stands at 887.

Of this total, 473 (53.3%) took place in hospital, 352 (39.7%) in care homes, eight (0.9%) in hospices and 54 (6.1%) at residential addresses or other locations. The 360 deaths which occurred in care homes and hospices involved 81 separate establishments.

The comparative number of deaths reported daily by the Department of Health to 11th September was 570. These figures are based on patients having previously tested positive for the virus, whereas the NISRA figures are based on the information entered on death certificates, completed by medical professionals. They may or may not have previously tested positive for the virus.

Further analysis, which includes deaths of care home residents in hospital, shows that of the 433 deaths of care home residents involving Covid-19 in the year to date to 11th September 2020, 81.3% (352) occurred in a care home, with the remaining 81 occurring in hospital. On this basis, deaths of care home residents account for 48.8% of all Covid-19 related deaths; however, no assumptions can be made in relation to where or when the deceased contracted the disease.

Separate analyses based on the date of death registration, shows that the provisional number of total deaths from all causes registered in Northern Ireland in the week ending 11th September 2020 (week 36) was 296, 62 more than in week 35 and 20 more than the 5-year average of 276. Over the last 24 weeks in total, 1,141 'excess deaths' (deaths above the average for the corresponding period in previous years) have been registered in Northern Ireland, with the number of 'excess deaths' in the year to date to 11th September totalling 882.

Covid-19 was mentioned on the death certificate of seven (2.4%) of the 296 deaths registered in week 36. This is four more than last week (week 35) and brings the total number of Covid-19 related deaths registered in the calendar year up to 11th September to 883.

Persons aged 75 and over accounted for two-thirds (64.9%) of all deaths and 79.3% of Covid-19 related deaths registered this calendar year up to 11th September.

For Covid-19 related deaths, those with an address in Belfast Local Government District (LGD) accounted for 251 (28.4%) of the 883 deaths registered in the calendar year to 11th September.

NOTES TO EDITORS

1. Statistics on weekly deaths registered in Northern Ireland can be found at: <https://www.nisra.gov.uk/publications/weekly-deaths>
2. All media queries to Department of Finance Press Office at dof.pressoffice@finance-ni.gov.uk or on Tel: 028 90816724. Out of office hours please contact the Duty Press Officer on 028 9037 8110 and your call will be returned.
3. Differences between NISRA's death registration statistics and the daily totals reported via the Department of Health are as follows:
 - The **daily updates** provided by the Department of Health (DoH) count the number of deaths reported by Trusts, where the deceased had a positive test for Covid-19 and died within 28 days, whether or not Covid-19 was the cause of death. DoH figures will not capture all deaths that do not meet this definition. These data are important because they are available earlier, and therefore give a quicker indication of what is happening day by day and are broadly comparable with the figures released daily in other parts of the United Kingdom (UK). **The DoH reported 570 deaths associated with Covid-19 by 11th September 2020 (including revisions up to 16th September 2020).**
 - NISRA weekly, provisional death statistics, which are based on death registration information collected by the General Register Office, count all deaths where Covid-19 was mentioned on the death certificate by the doctor who certified the death, whether or not Covid-19 was the primary underlying cause of death. The figures include cases where the doctor noted that there was suspected or probable coronavirus infection involved in the death. As a result the weekly totals will usually be higher than the relevant daily figures - because the DoH daily updates only include those who have tested positive for the virus.
4. Quoted figures based on occurrence take into account registrations up to 16th September 2020, to allow for delays in death registrations.
5. Analysis of care home residents refers to deaths where either (a) the death occurred in a care home, or (b) the death occurred elsewhere but the place of usual residence of the deceased was recorded as a care home. It should be

noted that the statistics will not capture those cases where a care home resident died in hospital or another location and the usual address recorded on their death certificate is not a care home; however no assumptions can be made about where or when the deceased contracted Covid-19 (and all figures include probable or suspect cases).
