# STATISTICS PRESS NOTICE – WEEKLY DEATH STATISTICS (Week ending 29<sup>th</sup> January 2021)

### 9.30am Friday 5th February 2021

## Covid-19 related deaths: week ending 29th January 2021

Latest figures published today by NISRA show that 124 deaths involving Covid-19 occurred in the week 23<sup>rd</sup> to 29<sup>th</sup> January 2021. The total number of Covid-19 related deaths that occurred up to 29<sup>th</sup> January 2021 has now reached 2,495.

Of the 2,495 Covid-19 related deaths, 1,591 (63.8%) took place in hospital, 712 (28.5%) in care homes, 13 (0.5%) in hospices and 179 (7.2%) at residential addresses or other locations. The 725 deaths which occurred in care homes and hospices involved 170 separate establishments.

The comparative number of deaths reported daily by the Department of Health to 29<sup>th</sup> January 2021 was 1,837. These figures are based on patients having previously tested positive for the virus, whereas the NISRA figures are based on the information entered on death certificates completed by medical professionals. They may or may not have previously tested positive for the virus.

Further analysis, which includes deaths of care home residents in hospital, shows that of the 932 deaths of care home residents involving Covid-19 which occurred between 18<sup>th</sup> March 2020 and 29<sup>th</sup> January 2021, 76.4% (712) occurred in a care home, with the remaining 220 occurring in hospital. On this basis, deaths of care home residents account for 37.4% of all Covid-19 related deaths; however, no assumptions can be made in relation to where or when the deceased contracted the disease.

Separate analyses, based on the <u>date of death registration</u>, shows that the provisional number of total deaths from all causes registered in Northern Ireland in the week ending 29<sup>th</sup> January 2021 (week 4, 2021) was 437, 37 less than week 3, and 78 more than the 5-year average (2016-2020) of 359.

Covid-19 was mentioned on the death certificate of 137 (31.4%) of the 437 deaths registered in week 4 2021, a fall from the previous week's pandemic record high of 182 Covid-19 related deaths. The total number of Covid-19 related deaths registered to 29<sup>th</sup> January 2021 has now reached 2,448.

Persons aged 75 and over accounted for 77.4% of the 2,448 Covid-19 related deaths registered between 19th March 2020 and 29th January 2021, while Antrim & Newtownabbey Local Government District had the highest proportion of Covid-19 related deaths as a proportion of the total deaths registered there over the period 19th March – 29th January 2021 (18.6%).

#### **NOTES TO EDITORS**

- 1. Statistics on weekly deaths registered in Northern Ireland can be found at: weekly death registration in Northern Ireland.
- 2. All media queries to Department of Finance Press Office at dof.pressoffice@finance-ni.gov.uk or on Tel: 028 90816724. The Executive Information Service operates an out of hours service For Media Enquiries Only between 1800hrs and 0800hrs Monday to Friday and at weekends and public holidays. The duty press officer can be contacted on 028 9037 8110.
- 3. Data for weeks 51, 52 and 1 are affected by the Christmas period. Week 51 contained one public holiday for 25 December, and week 52 contained two public holidays, 28 December and 1 January. As a result, death registrations were likely to be lower than the actual number of deaths that occurred in these weeks. Registrations for week 1 may be higher than normal as registrars deal with backlogs from the previous weeks. Care should therefore be taken in interpreting weekly data around the turn of the year as it is affected by public holidays and won't give a reliable indication of the trend
- 4. Differences between NISRA's death registration statistics and the daily totals reported via the Department of Health are as follows:
  - The daily updates provided by the Department of Health (DoH) count the number of deaths reported by Trusts, where the deceased had a positive test for Covid-19 and died within 28 days, whether or not Covid-19 was the cause of death. DoH figures will not capture all deaths that do not meet this definition. These data are important because they are available earlier, and therefore give a quicker indication of what is happening day by day and are broadly comparable with the figures released daily in other parts of the United Kingdom (UK). The DoH reported 1,837 deaths associated with Covid-19 by 29th January 2021 (including revisions up to 3rd February 2021).

- NISRA weekly, provisional death statistics, which are based on death registration information collected by the General Register Office, count all deaths where Covid-19 was mentioned on the death certificate by the doctor who certified the death, whether or not Covid-19 was the primary underlying cause of death. The figures include cases where the doctor noted that there was suspected or probable coronavirus infection involved in the death. As a result the weekly totals will usually be higher than the relevant daily figures because the DoH daily updates only include those who have tested positive for the virus.
- 5. Quoted figures based on occurrence take into account registrations up to 3<sup>rd</sup> February 2021, to allow for delays in death registrations.
- 6. Analysis of care home residents refers to deaths where either (a) the death occurred in a care home, or (b) the death occurred elsewhere but the place of usual residence of the deceased was recorded as a care home. It should be noted that the statistics will not capture those cases where a care home resident died in hospital or another location and the usual address recorded on their death certificate is not a care home; however no assumptions can be made about where or when the deceased contracted Covid-19 (and all figures include probable or suspect cases).
